Re: Commonwealth Edison Company Crawford Generating Station NPDES Permit No. IL0002186

- Modification of NPDES Permit (After Public Notice)

Gentlemen:

The Illinois Environmental Protection Agency has reviewed the request for modification of the above-referenced NPDES Permit and issued a public notice based on that request. The final decision of the Agency is to modify the Permit as follows:

The bottom ash hydrobin system that currently drains into Pit #13 will be relocated inland and discharge into Pit #16. Pit #13 will be taken out of service.

Enclosed is a copy of the modified Permit. You have the right to appeal this modification to the Illinois Pollution Control Board within a 35 day period following the modification date shown on the first page of the permit.

Should you have any question or comments regarding the above, please contact Beth Unser of my staff.

Very truly yours.

Thomas G. McSwiggin, P.E.

Manager, Permit Section

Division of Water Pollution Control

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

Modified (NPDES) Permit

Expiration Date: April 1, 2000

Issue Date: April 26, 1995 Effective Date: April 26, 1995 Modification Date: May 20, 1997

Name and Address of Permittee:

Commonwealth Edison Company Environmental Services Department Post Office Box 767, 35 FNW Chicago, Illinois 60690

Discharge Number and Name:

001 Condenser Cooling Water and House Service Water

001(a) Demineralizer Regenerant Wastes

001(b) Unit #7 and #8 Boiler Blowdown and Boiler Drain

001(c) Recirculating Wastewater Treatment System Blowdown

001(d) Intake Screen Backwash

002 Area 14 Runoff (Boiler Room Area)

Facility Name and Address:

Commonwealth Edison Company Crawford Generating Station 3501 South Pulaski Chicago, Illinois 60623 (Cook County)

Receiving Waters

Chicago Sanitary and Ship Canal

In compliance with the provisions of the Illinois Environmental Protection Act, Subtitle C Rules and Regulations of the Illinois Pollution Control Board, and the FWPCA, the above-named permittee is hereby authorized to discharge at the above location to the above-named receiving stream in accordance with the standard conditions and attachments herein.

Permittee is not authorized to discharge after the above expiration date. In order to receive authorization to discharge beyond the expiration date, the permittee shall submit the proper application as required by the Illinois Environmental Protection Agency (IEPA) not later than 180 days prior to the expiration date.

Thomas G. McSwiggin, P.E. Manager, Permit Section

Division of Water Pollution Control

SAMPLE

TYPE

NPDES Permit No. IL0002186

Effluent Limitations and Monitoring

1. From the effective date of this permit until the expiration date, the effluent of the following discharge(s) shall be monitored and limited at all times as follows:

Outfall(s): 001 Condenser Cooling Water and House Service Water***

This discharge consists of	of:	4	Approximate FI	ow
 Condenser Cooling W House Service Water Demineralizer Regene Boiler Blowdown Boiler Drain Recirculating Wastew Intake Screen Backwa 	erant Wastes ater Treatment System Blowdown		414.5 MGD 9.0 MGD 0.035 MGD 0.055 MGD Intermittent 1.05 MGD Intermittent

Copper		0.5	1.0	1/Month**	24 Hour Composite

*Shall be reported as a monthly average and daily maximum.

***See Special Condition 16.

Outfall: 002 Area 14 Runoff (Boiler Room Area)

^{**}The sampling frequency for total iron and total copper shall be daily during discharge of non-chemical metal cleaning wastes. At all other times the sampling frequency shall be once per month.

Special Conditions

SPECIAL CONDITION 1. The pH shall be in the range 6.0 to 9.0.

<u>SPECIAL CONDITION 2</u>. Samples taken in compliance with the effluent monitoring requirements shall be taken at a point representative of the discharge, but prior to entry into the receiving stream.

SPECIAL CONDITION 3. The receiving waters are designated as Secondary Contact and Indigenous Aquatic Life Waters by Section 302.408, Illinois Administration Code, Title 35, Chapter 1, Subtitle C, as amended. These waters shall meet the following standard:

Temperatures shall not exceed 93°F (34°C) more than 5% of the time, or 100°F (37.8°C) at any time at the edge of the mixing zone which is defined by Rule 302.102 of the above regulations.

<u>SPECIAL CONDITION 4</u>. In lieu of the requirements of Section 302.211(d) and (e), Illinois Administrative Code, Title 35, Subtitle C, as amended, effluent shall not alone or in combination with other sources cause temperatures in the main channel of the Lower Des Plaines River at the I-55 Bridge to exceed the temperatures set forth in the following table, except in accordance with the allowable monthly excursions detailed below:

	<u>Jan</u>	<u>Feb</u>	<u>Mar</u>	<u>Apr</u> 1-15	<u>Apr</u> 16-30	<u>May</u> 1-15	<u>May</u> 16-30		<u>June</u> 16-30	<u>July</u>	Aug	Sept	<u>Oct</u>	Nov	Dec
°F	60	60	65	73	80	85	90	90	91	91	91	90	85	75	65

These standards may be exceeded by no more than 3°F during 2% of the hours in the 12-month period ending December 31, except that at no time shall ComEd's plants cause the water temperature at the I-55 Bridge to exceed 93°F. (ComEd's plants continue to be subject to the Secondary Contact Standards at the point of discharge).

SPECIAL CONDITION 5. Permittee shall comply with all temperature limitations as imposed by the Pollution Control Board's order in AS 96-10, dated October 3, 1996.

SPECIAL CONDITION 6. Total residual oxidant shall not be discharged from any single generating unit for more than two hours per day. The daily mean concentration of total residual oxidant shall be based on a concentration curve. The concentration curve shall be generated using grab samples with a sampling frequency of five minutes or less over the exposure time. The exposure time is defined to be from the point of first detectable measurement to the point of the last detectable measurement of total residual oxidant. Concentration curves shall be submitted with Discharge Monitoring Reports. The frequency and duration of the oxidant dosing period plus the amount of chlorine or bromine applied shall be reported on the Discharge Monitoring Reports. For reporting purposes, the daily discharge shall be the average of all non-zero values measured in a day and the monthly average shall be the average of all daily discharges. Discharge Monitoring Reports shall indicate whether chlorine or bromine compounds were used during the month.

For the purpose of determining compliance, the highest single instantaneous TRC/TRO concentration measured during compliance curve sampling on any day will be regarded as the daily maximum concentration. Total residual oxidant concentration shall be measured and reported in terms of total residual chlorine.

SPECIAL CONDITION 7. This facility has the following discharges of storm water associated with industrial activity:

The east oil water separator and switch house building roof drains, which discharge to the Chicago municipal combined sewer system.

SPECIAL CONDITION 8. There shall be no discharge of polychlorinated biphenyl compounds.

SPECIAL CONDITION 9. There shall be no discharge of complexed metal bearing wastestreams and associated rinses from chemical metal cleaning unless this permit has been modified to include the new discharge.

SPECIAL CONDITION 10. Intake monitoring at Crawford Generating Station pursuant to Section 316(b) of the CWA was not required by USEPA in letters to Commonwealth Edison Company dated February 19, 1975 and June 1, 1976. It is determined that no intake monitoring or modification is being required by IEPA for reissuance of this NPDES Permit.

SPECIAL CONDITION 11. There shall be no discharge of collected debris from Outfall 001(d) Intake Screen Backwash.

Special Conditions

SPECIAL CONDITION 12. The permittee shall record monitoring results on Discharge Monitoring Report Forms using one such form for each discharge each month.

The completed Discharge Monitoring Report forms shall be submitted to IEPA no later than the 28th day of the following month, unless otherwise specified by the permitting authority.

Discharge Monitoring Reports shall be mailed to the IEPA at the following address:

Illinois Environmental Protection Agency Division of Water Pollution Control 2200 Churchill Road Post Office Box 19276 Springfield, Illinois 62794-9276

Attention: Compliance Assurance Section

SPECIAL CONDITION 13. The upset provisions of 40 CFR 122.41(n) are hereby incorporated by reference.

<u>SPECIAL CONDITION 14</u>. The Agency may modify this permit during its term to incorporate biomonitoring requirements and additional limitations or requirements based on the biomonitoring results. Modifications under this condition shall follow public notice and opportunity for hearing.

<u>SPECIAL CONDITION 15.</u> A discharge limit of 0.05 mg/l (instantaneous maximum) shall be achieved for total residual oxidant when promine biocides are used for condenser biofouling control, in accordance with Special Condition 4. Total residual oxidant shall be measured and reported in terms of total residual chlorine. Construction of treatment facilities which may be necessary to meet the limit for total residual oxidant may not be started until a construction permit has been issued by the Agency.

SPECIAL CONDITION 16. The Agency has determined that the effluent limitations in this permit constitute BAT/BCT for storm water which is treated in the existing treatment facilities for purposes of this permit reissuance, and no pollution prevention plan will be required for such storm water. In addition to the chemical specific monitoring required elsewhere in this permit, the permittee shall conduct an annual inspection of the facility site to identify areas contributing to a storm water discharge associated with industrial activity, and determine whether any facility modifications have occurred which result in previously-treated storm water discharges no longer receiving treatment. If any such discharges are identified the permittee shall request a modification of this permit within 30 days after the inspection. Records of the annual inspection shall be retained by the permittee for the term of this permit and be made available to the Agency on request.

SPECIAL CONDITION 17. STORM WATER POLLUTION PREVENTION PLAN (SWPPP)

- A. A storm water pollution prevention plan shall be developed by the permittee for the storm water associated with industrial activity at this facility. The plan shall identify potential sources of pollution which may be expected to affect the quality of storm water discharges associated with the industrial activity at the facility. In addition, the plan shall describe and ensure the implementation of practices which are to be used to reduce the pollutants in storm water discharges associated with industrial activity at the facility and to assure compliance with the terms and conditions of this permit.
- B. The plan shall be completed within 180 days of the effective date of this permit. Plans shall provide for compliance with the terms of the plan within 365 days of the effective date of this permit. The owner or operator of the facility shall make a copy of the plan available to the Agency at any reasonable time upon request.
- C. The permittee may be notified by the Agency at any time that the plan does not meet the requirements of this condition. After such notification, the permittee shall make changes to the plan and shall submit a written certification that the requested changes have been made. Unless otherwise provided, the permittee shall have 30 days after such notification to make the changes.
- D. The discharger shall amend the plan whenever there is a change in construction, operation, or maintenance which may affect the discharge of significant quantities of pollutants to the waters of the State or if a facility inspection required by paragraph G of this condition indicates that an amendment is needed. The plan should also be amended if the discharger is in violation of any conditions of this permit, or has not achieved the general objective of controlling pollutants in storm water discharges. Amendments to the plan shall be made within the shortest reasonable period of time, and shall be provided to the Agency for review upon request.

May 20, 1997

NPDES Permit No. IL0002186

Special Conditions

- E. The plan shall provide a description of potential sources which may be expected to add significant quantities of pollutants to storm water discharges, or which may result in non-storm water discharges from storm water outfalls at the facility. The plan shall include, at a minimum, the following items:
 - A topographic map extending one-quarter mile beyond the property boundaries of the facility, showing: the facility, surface water bodies, wells (including injection wells), seepage pits, infiltration ponds, and the discharge points where the facility's storm water discharges to a municipal storm drain system or other water body. The requirements of this paragraph may be included on the site map if appropriate.
 - 2. A site map showing:
 - The storm water conveyance and discharge structures;
 - ii. An outline of the storm water drainage areas for each storm water discharge point;
 - iii. Paved areas and buildings;
 - iv. Areas used for outdoor manufacturing, storage, or disposal of significant materials, including activities that generate significant quantities of dust or particulates.
 - v. Location of existing storm water structural control measures (dikes, coverings, detention facilities, etc.);
 - vi. Surface water locations and/or municipal storm drain locations
 - vii. Areas of existing and potential soil erosion;
 - viii. Vehicle service areas;
 - ix. Material loading, unloading, and access areas.
 - 3. A narrative description of the following:
 - The nature of the industrial activities conducted at the site, including a description of significant materials that are treated, stored or disposed of in a manner to allow exposure to storm water;
 - Materials, equipment, and vehicle management practices employed to minimize contact of significant materials with storm water discharges;
 - iii. Existing structural and non-structural control measures to reduce pollutants in storm water discharges;
 - iv. Industrial storm water discharge treatment facilities;
 - v. Methods of onsite storage and disposal of significant materials;
 - 4. A list of the types of pollutants that have a reasonable potential to be present in storm water discharges in significant quantities.
 - 5. An estimate of the size of the facility in acres or square feet, and the percent of the facility that has impervious areas such as pavement or buildings.
 - 6. A summary of existing sampling data describing pollutants in storm water discharges.
- The plan shall describe the storm water management controls which will be implemented by the facility. The appropriate controls shall reflect identified existing and potential sources of pollutants at the facility. The description of the storm water management controls shall include:

Special Conditions

- Storm Water Pollution Prevention Personnel Identification by job titles of the individuals who are responsible for developing, implementing, and revising the plan.
- Preventive Maintenance Procedures for inspection and maintenance of storm water conveyance system devices such as oil/water separators, catch basins, etc., and inspection and testing of plant equipment and systems that could fail and result in discharges of pollutants to storm water.
- Good Housekeeping Good housekeeping requires the maintenance of clean, orderly facility areas that discharge storm water.
 Material handling areas shall be inspected and cleaned to reduce the potential for pollutants to enter the storm water conveyance system.
- 4. Spill Prevention and Response Identification of areas where significant materials can spill into or otherwise enter the storm water conveyance systems and their accompanying drainage points. Specific material handling procedures, storage requirements, spill clean up equipment and procedures should be identified, as appropriate. Internal notification procedures for spills of significant materials should be established.
- 5. Storm Water Management Practices Storm water management practices are practices other than those which control the source of pollutants. They include measures such as installing oil and grit separators, diverting storm water into retention basins, etc. Based on assessment of the potential of various sources to contribute pollutants, measures to remove pollutants from storm water discharge shall be implemented. In developing the plan, the following management practices shall be considered:
 - Containment Storage within berms or other secondary containment devices to prevent leaks and spills from entering storm water runoff;
 - Oil & Grease Separation Oil/water separators, booms, skimmers or other methods to minimize oil contaminated storm water discharges;
 - Debris & Sediment Control Screens, booms, sediment ponds or other methods to reduce debris and sediment in storm water discharges;
 - iv. Waste Chemical Disposal Waste chemicals such as antifreeze, degreasers and used oils shall be recycled or disposed of in an approved manner and in a way which prevents them from entering storm water discharges.
 - Storm Water Diversion Storm water diversion away from materials manufacturing, storage and other areas of potential storm water contamination;
 - vi. Covered Storage or Manufacturing Areas Covered fueling operations, materials manufacturing and storage areas to prevent contact with storm water.
- Sediment and Erosion Prevention The plan shall identify areas which due to topography, activities, or other factors, have a high potential for significant soil erosion and describe measures to limit erosion.
- Employee Training Employee training programs shall inform personnel at all levels of responsibility of the components and goals
 of the storm water pollution control plan. Training should address topics such as spill response, good housekeeping and material
 management practices. The plan shall identify periodic dates for such training.
- Inspection Procedures Qualified plant personnel shall be identified to inspect designated equipment and plant areas. A tracking
 or follow-up procedure shall be used to ensure appropriate response has been taken in response to an inspection. Inspections
 and maintenance activities shall be documented and recorded.
- 3. The permittee shall conduct an annual facility inspection to verify that all elements of the plan, including the site map, potential pollutant sources, and structural and non-structural controls to reduce pollutants in industrial storm water discharges are accurate. Observations that require a response and the appropriate response to the observation shall be retained as part of the plan. Records documenting significant observations made during the site inspection shall be submitted to the Agency in accordance with the reporting requirements of this permit.

Modification Date: May 20, 1997

NPDES Permit No. IL0002186

Special Conditions

- H. This plan should briefly describe the appropriate elements of other program requirements, including Spill Prevention Control and Countermeasures (SPCC) plans required under Section 311 of the CWA and the regulations promulgated thereunder, and Best Management Programs under 40 CFR 125.100.
- The plan is considered a report that shall be available to the public under Section 308(b) of the CWA. The permittee may claim
 portions of the plan as confidential business information, including any portion describing facility security measures.
- J. The plan shall include the signature and title of the person responsible for preparation of the plan and include the date of initial preparation and each amendment thereto.

REPORTING

- K. The facility shall submit an annual inspection report to the Illinois Environmental Protection Agency. The report shall include results of the annual facility inspection which is required by Part G of the Storm Water Pollution Prevention Plan of this permit. The report shall also include documentation of any event (spill, treatment unit malfunction, etc.) which would require an inspection, results of the inspection, and any subsequent corrective maintenance activity. The report shall be completed and signed by the authorized facility employee(s) who conducted the inspection(s).
- L. The first report shall contain information gathered during the one year time period beginning with the effective date of coverage under this permit and shall be submitted no later than 60 days after this one year period has expired. Each subsequent report shall contain the previous year's information and shall be submitted no later than one year after the previous year's report was due.
- 1. Annual inspection reports shall be mailed to the following address:

Illinois Environmental Protection Agency Division of Water Pollution Control Compliance Assurance Section Annual Inspection Report 2200 Churchill Road P.O. Box 19276 Springfield, Illinois 62794-9276

N. If the facility performs inspections more frequently than required by this permit, the results shall be included as additional information in the annual report.

SPECIAL CONDITION 18. In the event the permittee shall require the use of water tratment additives not previously used in the station's main condensors, the permittee shall request a modification in the permit in accordance with the standard conditions, Attachment H.

SPECIAL CONDITION 19. The use or operation of this facility shall be by or under the supervision of a Certified Class K operator.

ATTACHMENT H

Standard Conditions

Definitions

Act means the Bloom Environmental Protection Act, Ch. 111, 1-2 III Rev. Stat., Sec. 1001 1052 as Amended

Assency means the Minore Environmental Protection Agency

Board means the Illinois Pollution Control Board

Clean Water Act (formerly referred to as the Federal Water Pollution Control Act) means Peb 1 97-500, as amended 33 U.S.C. 1251 et seq.

NPDES (Naturnal Pollutant Discharge Elimination System) makins the national program for issuing, modifying, revoking and researing, terminating, monitoring partial partials, and improving and enforcing pretreatment requirements, under Sections 307, 402, 318 and 405 of the Clean Water Add.

USEPA means the United States Environmental Protection Agency

Daily Discharge means the discharge of a pollutent measured during a calender day or any 24-hour period that reasonably represents the calender day for purposes of sampling for pollutents with limitations expressed in units of mass, the "dash discharge" is calculated as the total mass of the pollutent discharged over the day. For pollutents with limitations expressed in other units of measurements, the "dashy discharge" is calculated as the average measurement of the pollutent over the day.

Maximum Daily Discharge Limitation (daily maximum) inners the highest alloweble daily discharge

Average Monthly Discharge Limitation (30 day average) means the highest allowable average of daily discharges over a calendar month, calculated as the sum of all daily discharges measured during a calendar month divided by the number of daily discharge; measured during that month.

Average Weekly Discharge Limitation (7 day average) means the highest allowable average of daily discharges over a calendar week, calculated as the sum of all daily discharges measured during a calendar week divided by the number of daily discharges measured during that week.

Best Management Practices (BMPs) means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the State BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or feaks, studge or waste disposal, or drainage from raw inaterial storage.

Aliquot meens a sample of specified volume used to make up a total composite sample

Grab Sample means an inclinidual sample of at least 100 millilities collected at a randomlyselected time over a period not exceeding 15 minutes

24 Hour Composite flample means a combination of at least 8 sample aliquots of at least 100 millitiers, collected at periodic intervels during the operating hours of a facility over a 24-hour period.

8 Hour Composite Sample means a combination of at least 3 sample aliquots of at least 100 millisters, collected at periodic intervals during the operating hours of a facility over an 8-hour period.

Flow Proportional Composite Sample means a combination of sample abiquots of all least 100 mm3.5ms collected at periodic intervals such that either thin time interval between each adequat or the volcene of each abiquot is proportional to either the streen flow at the time of sampling or the total streen flow since the collection of the previous aliquot.

- Duty to comply. The parmittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the Act and is grounds for enforcement action, permit termination, revocation and reissuance, modification, or for desiral of a permit reisswall application. The permittee shall comply with atthuant standards or prohibitions established under Section 30 f(a) of the Clean Water Act for toxic pullutarits within the time provided in the regulations that establish these standards or prohibitions, even if the permit has not yet been madified to incorporate the requirement.
- (2) Duty to reapply If the permittee wishes to continue an activity regulated by this permit after the expension date of this permit, the permittee must apply for and obtain a new permit. If the permittee submits a proper application as required by the Agency no later than 180 days prior to the expession date, this permit shall continue in full force and effect until the final Agency decision on the application has been made.
- (3) Need to held or reduce activity not a defense it shall not be a defense for a permitter in an enforcement action that it would have been necessary to held or reduce the permitted activity in order to maintain compliance with the conditions of this permit.
- (4) Duty to mitigate The permittee shall take all researched steps to minimize or prevent any discharge in violation of this permit which has a resonable likelihood of edversely affecting human health or the environment.
- (5) Proper operation and meintenance. The permittee shall at all tones properly operate and meintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit Proper operation and maintenance includes effective performance, adoquete hinding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up, or autolory facilities, or similar systems only when necessary to achieve compliance with the conditions of the permit.

- (6) Permit actions This permit may be modified, revoked and reissued, or terminated for cause by the Agency pursuant to 40 CFR 122.62. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.
- Property rights This permit does not convey any property rights of any sort, or any exclusive provided.
- (8) Duty to provide information. The permittee shall furnish to the Agency within a reasonable lime, any information which the Agency may request to determine whether cause sixts for modifying, revoking and reliasing, or terminating this permit, or to determine compliance with the permit. The permittee shall also furnish to the Agency, upon request, copies of records required to be kept by this permit.
- (9) Inspection and entry. The permittee shall allow an authorized representative of the Agency, upon the presentation of credentials and other documents as may be required by law, to.
 - Enter upon the permittee's premises where a regulated facility or activity is lucated or conducted, or where records must be kept under the conditions of this sermit.
 - (b) Have sccess to and copy, at reasonable times, any records that must be kept under the conditions of this permit,
 - (c) Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit, and
 - (d) Sample or monitor at reasonable times, for the purpose of assuring permit compliance, or as otherwise authorized by the Act, any substances or parameters at any location.

(10) Monitoring and records

- (a) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.
- tb) The permittee shall retain records of all monitoring information, including all calibration and maintenance records, and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a pariod of at least 3 years from the data of this permit, measurement, report or application. This period may be extended by request of the Agency at any time.
- (c) Records of monitoring information shall include:
 - (1) The date, exact place, and time of sampling or measurements;
 - (2) The individual(s) who performed the sampling or measurements;
 - (3) The date(s) analyses were performed;
 - (4) The individual(s) who performed the analyses;
 - (5) The analytical techniques or methods used, and
 - (8) The results of such analyses.
- (d) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136, unless other test procedures have been specified in this permit. Where no test procedure under 40 CFR Part 136 has been approved, the permittee must submit to the Agency a test method for approved. The permittee shall calibrate and perform maintenance procedures on all monitoring and analytical instrumentation at intervals to ensure accuracy of measurements.
- [11] Signatory requirement. All applications, reports or information submitted to the Agency shall be signed and certified.
 - (a) Application All permit applications shall be signed as follows:
 - For a corporation by a principal executive officer of at least the level of vice president or a person or position having overall responsibility for environmental matters for the corporation;
 - (2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or
 - (3) For a municipality, State, Federal, or other public agency: by either a principal executive officer or ranking elected official.
 - (b) Reports All reports required by permits, or other information requested by the Agency shall be signed by a person described in paragraph (a) or by a duly authorized representative of that person. A person is a duly authorized representative only if.
 - (1) The authorization is made in writing by a person described in paregraph (e), and
 - (2) The authorization specifies either an individual or a position responsible for the overall operation of the facility, from which the discharge originates, such as a plant manager, superintendent or person of equivalent responsibility; and
 - (3) The written authorization is submitted to the Agency.

(c) Changes of Authorization If an authorization under (b) is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of (b) must be submitted to the Agency prior to or together with any reports, information, or applications to be signed by an authorized repossibilities.

(12) Reporting requirements.
